THE FASTEST LOGIN FOR WURM APPLICATIONS

FAST LOGIN – TOP SECURITY

Virtually everyone knows this from their every-day digitalised lives - the more different pass-word-protected applications and programs you use, the more user names and passwords you have to remember.
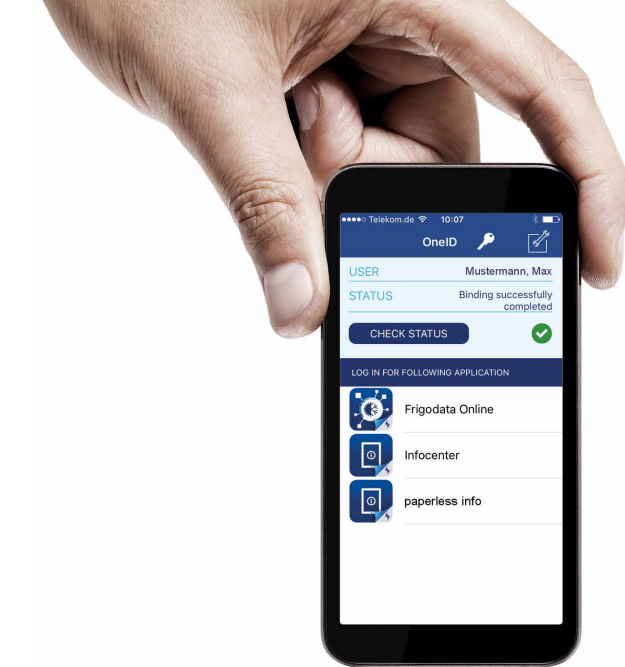

In order to facilitate access to your various Wurm applications considerably and at the same time ensure the highest security, Wurm has developed the OneID app. The short formula for this technological feat: ONE identity for your Wurm applications.

To achieve this, your own mobile device (e.g. smartphone) is connected to your own user identity in the Wurm system with the app in a unique process. All individual rights and roles for all applications are coupled to this identity.

Signing up to a specific Wurm application is then easy and fast, via the corresponding icon on the OneID screen or using push notifications.

With OneID you no longer need to remember or make note of several passwords. The app makes access to Wurm applications not only faster and more comfortable, but also more secure.

The current version of OneID enables you to ma-nage all of your mobiles devices in the app. For example, you can even check out a device no longer required. An additional value for daily use!

Unique binding process

To use the app, you must bind your mobile device to the Wurm security centre once after downloading the app free in the App Store or Google Play Store. This works easily, either by confirming your identity through the email address or your own mobile number.

This action, which only needs to be performed once, connects your smartphone to your perso-nal identity in the Wurm security centre and you can use the app for the fastest possible access to your Wurm applications.

Fast, easy and secure use

If, for instance, you call up the FRIGODATA ONLINE homepage on your work device (PC, laptop etc.), you only have to enter your email address there. Just tap on the icon in OneID or confirm your login in the push notification and you will immediately be in the application you require on your work device.

The connection is, of course, securely encrypted and completely fulfils the high security stan-dards of all Wurm solutions. With OneID on your smartphone you have fast and easy access to Wurm applications literally in your pocket.

OneID –
BENEFITS AT A GLANCE

- **Real user guarantee** – OneID binds mobile end devices to a single personal user identity.

- **Clear role allocation** – all individual rights and roles per application are coupled to the user identity.

- **Uncomplicated binding process** – either by personal email address check or mobile number check.

- **All-round protection** – the connection is safely encrypted and fulfils the high standard requirements of all Wurm solutions.

- **No speed limit** – safe and fast access to all Wurm applications via OneID.

- **Just one fingertip** – register for a specific application via the corresponding button in OneID or even more simple by using push notifications.

- **From app to app** – apps on verified devices automatically access the stored Identity.

- **No effort** – no need for the traditional login procedures with user name and password.

- **Everything at a glance** – management of the devices connected to your own identity.
